

CHECKLIST FOR DEVELOPMENT OF BIO HAZARDOUS WASTE PLAN

- () Current method of how biohazardous waste is collected, handled, and disposed.
- () Method of how EMS personnel collect biohazardous waste produced or obtained by personnel, through patient care, from the scene of a prehospital incident, and how this waste is handled on the vehicle.
- () Method of how your Service will dispose of biohazardous waste according to practices prescribed by the Alabama Department of Environmental Management (ADEM), once those specified practices for prehospital healthcare providers are finalized by ADEM.
- () Method of how biohazardous waste is collected at your Service's base station or substation and placed in a red plastic bag labeled, "BIOHAZARDOUS WASTE" or "INFECTIOUS WASTE", and subsequently disposed of according to practices prescribed by ADEM (IF APPLICABLE).
- () Method of how biohazardous waste is combined with a hospital's biohazardous waste for disposal by the hospital. Specify which hospital (IF APPLICABLE).
- () Method of storage of biohazardous waste no longer than thirty (30) days from the time of generation before removal to a treatment facility, permitted by ADEM to accept such waste.
- () Method of transport of biohazardous waste by a lawfully registered biohazardous materials transporter, if more than twenty-five (25) pounds of waste has been accumulated, once the requirements for this registration for prehospital healthcare providers are finalized by ADEM.
