INTRODUCTION

County Health Profiles and many other reports prepared by the Center for Health Statistics are available on the Internet at www.adph.org/healthstats. Look on the left side of the screen and click on “Publications.” This site also contains many charts, graphs and maps that are not included in individual publications as well as data for previous years.

Data for each county are displayed on two pages. Various footnotes give explanatory details about the different kinds of rates presented in the tables. Additional information may be obtained from the Technical Notes and Definitions in Appendix B.

ALABAMA 2013 HEALTH PROFILE

BIRTHS BY AGE OF MOTHER					
	TOTAL	10-14	15-17	18-19	20 plus
All births	58,162	64	1,460	3,896	52,742
Rate	---	0.4	15.5	62.0	54.6
White	38,604	27	829	2,338	35,410
Rate	---	0.3	13.9	58.6	55.2
Black & Other	19,558	37	631	1,558	17,332
Rate	---	0.7	18.3	67.9	53.5

Rates for age group are per 1,000 females in specified age group (age-specific birth rate).
Births with unknown age of mother counted with the age group "20 plus".

Marriages	37,789
Rate	7.8
Divorces	17,805
Rate	3.7

Rate is per 1,000 population.

2013 POPULATION	
Total	4,833,722
White	3,376,295
Black and Other	1,457,427
Median age	38.4
Life expectancy at birth	75.6
Total fertility rate per 1,000 Women aged 10-49	1793.0

NATALITY					
	All Women		Women 10-19		
	Total	Rate	Total	Rate	
Est. pregnancies	77,958	81.2	7,560	24.2	
Births	58,162	12.0	5,420	17.4	
Abortions	7,423	7.7	964	3.1	
Est. fetal losses	12,373	---	1,176	---	

Birth rate is per 1,000 population.
Pregnancy and abortion rates are per 1,000 females 15-44. Rate is per 1,000 women 10-19.

	All women		Women 10 to 19	
	Total	Percent	Total	Percent
Births to unmarried women	24,566	42.2	4,431	81.8
Low weight births	5,824	10.0	563	10.4
Multiple births	2,007	3.5	99	1.8
Medicaid births	29,810	52.6	4,440	83.2

Percent is percent of all births with known status. Percent is percent of all births to women 10-19.

SELECTED NOTIFIABLE DISEASES New Cases	
HIV	651
Syphilis	669
Gonorrhea	8,374
Chlamydia	29,645
Tuberculosis	108

INFANT RELATED MORTALITY BY MOTHER'S RACE AND AGE GROUP						
	All Ages			Ages 10-19		
	Total	White	Black & Other	Total	White	Black & Other
Infant deaths	500	266	234	68	28	40
Rate per 1,000 births	8.6	6.9	12.0	12.5	8.8	18.0
Postneonatal deaths	178	102	76	25	12	13
Rate per 1,000 births	3.1	2.6	3.9	4.6	3.8	5.8
Neonatal deaths	322	164	158	43	16	27
Rate per 1,000 births	5.5	4.2	8.1	7.9	5.0	12.1

Inf. & pneumonia	1,035	21.4	508	21.7	527	21.2	827	24.5	208	14.3
Alzheimer's disease	1,399	28.9	401	17.1	998	40.1	1,189	35.2	210	14.4
Suicide	719	14.9	566	24.1	153	6.1	649	19.2	70	4.8
Homicide	420	8.7	335	14.3	85	3.4	134	4.0	286	19.6
HIV disease	121	2.5	84	3.6	37	1.5	33	1.0	88	6.0

Rate is per 100,000 population.

ACCIDENTAL DEATHS				
	Total	Rate	Children Under 20	Rate
All accidents	2,302	47.6	181	14.6
Motor vehicle	904	18.7	112	9.0
Suffocation	123	2.5	20	1.6
Poisoning	540	11.2	6	0.5
Smoke, fire and flames	85	1.8	9	0.7
Falls	237	4.9	1	0.1
Drowning	69	1.4	17	1.4
Firearms	25	0.5	5	0.4
Other accidents	319	---	11	---

Total rate is per 100,000 population. Child rate is per 100,000 children aged 0 to 19.

DEATHS BY AGE GROUP		
Age group	Total	Rate
Total	50,140	10.4
0 to 14	700	0.8
15 to 44	3,270	1.7
45 to 64	11,405	8.9
65 to 84	22,189	34.7
85+	12,576	153.4

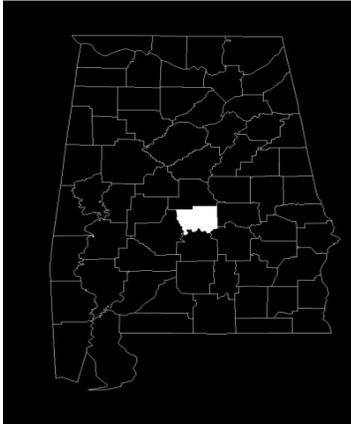

Rate is per 1,000 population in age group.

Selected Cancer Site	Deaths	Rate	Male		Female	
			Deaths	Rate	Deaths	Rate
All cancers	10,331	213.7	5,733	244.4	4,598	184.8
Trachea, bronchus, lung, pleura	3,165	65.5	1,886	80.4	1,279	51.4
Colorectal	989	20.5	553	23.6	436	17.5
Breast	660	13.7	0	0.0	660	26.5
Prostate (male)	470	9.7	470	20.0	0	0.0
Pancreas	621	12.8	337	14.4	284	11.4
Leukemias	372	7.7	206	8.8	166	6.7
Non-Hodgkin's lymphomas	324	6.7	169	7.2	155	6.2
Ovary (female)	235	4.9	0	0.0	235	9.4
Brain and other nervous system	298	6.2	169	7.2	129	5.2
Stomach	190	3.9	124	5.3	66	2.7
Uterus & cervix (female)	216	4.5	0	0.0	216	8.7
Esophagus	212	4.4	177	7.5	35	1.4
Melanoma of skin	149	3.1	103	4.4	46	1.8
Other	2,430	---	1,539	---	891	---

Rate is per 100,000 population.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are shaded. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population estimates are from the United States Census Bureau.

AUTAUGA 2013 HEALTH PROFILE

BIRTHS BY AGE OF MOTHER					
	TOTAL	10-14	15-17	18-19	20 plus
All births	598	1	18	42	537
Rate	---	0.5	15.4	53.8	47.6
White	455	0	13	31	411
Rate	---	0.0	15.0	53.6	48.2
Black & Other	143	1	5	11	126
Rate	---	2.0	16.4	54.2	45.8

Rates for age group are per 1,000 females in specified age group (age-specific birth rate).
Births with unknown age of mother counted with the age group "20 plus".

Marriages	354
Rate	6.4
Divorces	133
Rate	2.4

Rate is per 1,000 population.

2013 POPULATION	
Total	55,246
White	43,168
Black and Other	12,078
Median age	37.7
Life expectancy at birth	74.5
Total fertility rate per 1,000 women aged 10-49	1693.5

NATALITY					
	All Women		Women 10-19		
	Total	Rate	Total	Rate	
Est. pregnancies	808	72.4	88	21.6	
Births	598	10.8	61	15.0	
Abortions	83	7.4	14	3.4	
Est. fetal losses	127	---	13	---	

Birth rate is per 1,000 population.
Pregnancy and abortion rates are per 1,000 females 15-44. Rate is per 1,000 women 10-19.

	All Women		Women 10 to 19	
	Total	Percent	Total	Percent
Births to unmarried women	237	39.6	53	86.9
Low weight births	43	7.2	2	3.3
Multiple births	6	1.0	0	0.0
Medicaid births	266	44.6	47	77.0

Percent is percent of all births with known status. Percent is percent of all births to women 10-19.

SELECTED NOTIFIABLE DISEASES New Cases	
HIV	4
Syphilis	5
Gonorrhoea	56
Chlamydia	233
Tuberculosis	0

Esophagus	7	3.6	5	5.2	2	2.0
Melanoma of skin	7	3.6	5	5.2	2	2.0
Other	107	---	77	---	30	---

Rate is per 100,000 population.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are shaded. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population estimates are from the United States Census Bureau.

Esophagus	1	4.4	1	8.2	0	0.0
Melanoma of skin	3	13.3	2	16.5	1	9.7
Other	11	---	7	---	4	---

Rate is per 100,000 population.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are shaded. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population estimates are from the United States Census Bureau.

Esophagus	1	4.9	0	9.2
Melanoma of skin	0	0.0	0	0.0
Other	14	---	7	---

Rate is per 100,000 population.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are shaded. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population estimates are from the United States Census Bureau.

Esophagus	0	0.0	0	0.0	0	0.0
Melanoma of skin	2	7.6	0	0.0	2	15.2
Other	20	---	14	---	6	---

Rate is per 100,000 population.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are shaded. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population estimates are from the United States Census Bureau.

Esophagus	2	7.9	2	16.8	0	0.0
Melanoma of skin	3	11.9	2	16.8	1	7.5
Other	12	---	7	---	5	---

Rate is per 100,000 population.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are shaded. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population estimates are from the United States Census Bureau.

Esophagus	2	3.9	2	7.9
Melanoma of skin	0	0.0	0	0.0
Other	25	---	17	---

Rate is per 100,000 population.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are shaded. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population estimates are from the United States Census Bureau.

Rate is per 100,000 population.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are shaded. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population estimates are from the United States Census Bureau.

Total	167	11.9
0 to 14	1	0.4
15 to 44	6	1.2
45 to 64	38	9.7
65 to 84	73	34.0
85+	49	160.7

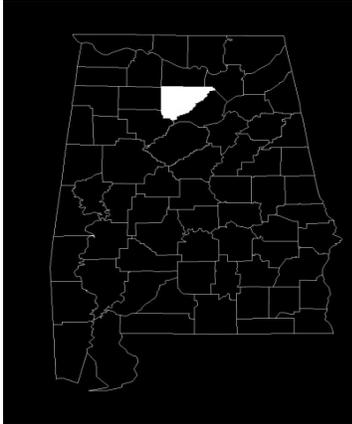

Rate is per 1,000 population in age group.

Selected Cancer Site			Male	Female
	Deaths	Rate	Deaths	Rate
All cancers	34	243.1	18	265.4
Trachea, bronchus, lung, pleura	10	71.5	6	88.5
Colorectal	1	7.2	1	14.7
Breast	3	21.5	0	0.0
Prostate (male)	4	28.6	4	59.0
Pancreas	1	7.2	1	14.7
Leukemias	1	7.2	0	0.0
Non-Hodgkin's lymphomas	0	0.0	0	0.0
Ovary (female)	0	0.0	0	0.0
Brain and other nervous system	1	7.2	0	0.0
Stomach	0	0.0	0	0.0
Uterus & cervix (female)	2	14.3	0	0.0
Esophagus	0	0.0	0	0.0
Melanoma of skin	1	7.2	0	0.0
Other	10	---	6	---

Rate is per 100,000 population.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are shaded. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population estimates are from the United States Census Bureau.

Esophagus	4	9.5	4	20.5	0	0.0
Melanoma of skin	2	4.8	2	10.2	0	0.0
Other	14	---	7	---	7	---

Rate is per 100,000 population.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are shaded. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population estimates are from the United States Census Bureau.

Esophagus	0	0.0	0	0.0	0	0.0
Melanoma of skin	0	0.0	0	0.0	0	0.0
Other	17	---	9	---	8	---

Rate is per 100,000 population.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are shaded. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population estimates are from the United States Census Bureau.

Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population estimates are from the United States Census Bureau.

FRANKLIN 2013 HEALTH PROFILE

BIRTHS BY AGE OF MOTHER					
	TOTAL	10-14	15-17	18-19	20 plus
All births	421	0	14	29	378

Esophagus	0	0.0	0	0.0	0	0.0
Melanoma of skin	0	0.0	0	0.0	0	0.0
Other	2	---	1	---	1	---

Rate is per 100,000 population.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are shaded. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population estimates are from the United States Census Bureau.

Esophagus	0	0.0	0	0.0	0	0.0
Melanoma of skin	1	7.0	1	14.4	0	0.0
Other	6	---	4	---	2	---

Rate is per 100,000 population.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are shaded. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population estimates are from the United States Census Bureau.

Stomach	1	3.0	1	6.1	0	0.0
Uterus & cervix (female)	0	0.0	0	0.0	0	0.0
Esophagus	2	6.0	1	6.1	1	5.8
Melanoma of skin	3	8.9	2	12.2	1	5.8
Other	9	---	5	---	4	---

Rate is per 100,000 population.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are shaded. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population estimates are from the United States Census Bureau.

Esophagus	0	0.0	0	0.0	0	0.0
Melanoma of skin	0	0.0	0	0.0	0	0.0
Other	6	---	3	---	3	---

Rate is per 100,000 population.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are shaded. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population estimates are from the United States Census Bureau.

Esophagus	1	5.0	0	0.0	1	9.4
Melanoma of skin	0	0.0	0	0.0	0	0.0
Other	15	---	9	---	6	---

Rate is per 100,000 population.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are shaded. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population estimates are from the United States Census Bureau.

Melanoma of skin	14	3.4	10	5.0	4	1.9
Other	233	---	148	---	85	---

Rate is per 100,000 population.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are shaded. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population estimates are from the United States Census Bureau.

Melanoma of skin	5	2.2	3	2.8	2	1.7
Other	119	---	69	---	50	---

Rate is per 100,000 population.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are shaded. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population estimates are from the United States Census Bureau.

Melanoma of skin	2	10.3	1	10.7	1	9.9
Other	6	---	4	---	2	---

Rate is per 100,000 population.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are shaded. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population estimates are from the United States Census Bureau.

Esophagus	4	6.7	4	13.7	0	0.0
Melanoma of skin	0	0.0	0	0.0	0	0.0
Other	25	---	13	---	12	---

Rate is per 100,000 population.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are shaded. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population estimates are from the United States Census Bureau.

Esophagus	1	7.5	1	16.5	0	0.0
Melanoma of skin	0	0.0	0	0.0	0	0.0
Other	8	---	5	---	3	---

Rate is per 100,000 population.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are shaded. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population estimates are from the United States Census Bureau.

Melanoma of skin	5	12.1	5	25.0	0	0.0
Other	29	---	19	---	10	---

Rate is per 100,000 population.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are shaded. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population estimates are from the United States Census Bureau.

Esophagus	0	0.0	0	0.0	0	0.0
Melanoma of skin	0	0.0	0	0.0	0	0.0
Other	8	---	8	---	0	---

Rate is per 100,000 population.

Measurements based on small denominators should be used with caution. Rates and ratios based on a denominator of less than 50 births or less than 1,000 population are shaded. Births, abortions and estimated total fetal losses sum to the total number of estimated pregnancies. Estimated total fetal losses is not the same as the total number of fetal deaths. The total fertility rate is the sum of age-specific birth rates multiplied by the width of the intervals, i.e. 5 years. A total fertility rate of 2,100 births per 1,000 females 10-49 years of age would maintain the current population. Population estimates are from the United States Census Bureau.

WILCOX 2013 HEALTH PROFILE

BIRTHS BY AGE OF MOTHER					
	TOTAL	10-14	15-17	18-19	20 plus
All births	137	0	4	12	121

TECHNICAL NOTES

Sources and Completeness of Data

Data in this publication are from certificates and reports filed with the Center for Health Statistics (CHS) in the Alabama Department of Public Health according to Alabama Vital Statistics Laws. The State Registrar of Vital Records enforces the laws and administers the system of vital statistics. Birth, death, marriage and divorce certificates and fetal death and induced termination of pregnancy reports provide most of the information included in this publication. Data for HIV are reported by the HIV/AIDS Division of ADPH. Syphilis, Gonorrhea and Chlamydia are reported by the STD Division, and Tuberculosis data are reported by the Tuberculosis Control Division. Starting in 2012, AIDS, which had been listed separately, is now considered Stage III of HIV and will be included in the HIV total. The statewide data for Alabama are also sent to the National Center for Health Statistics (NCHS) for inclusion in national reports and tabulations.

BIRTHS. If a birth occurs in a hospital, the birth certificate is filed by that institution with the CHS. Information on a birth certificate is obtained from a parent and from medical files for the mother and infant. All birthing hospitals in Alabama use an internet based Electronic Birth Registration (EBR) System to complete and transmit birth certificates to the CHS. If a birth occurs outside of a facility, the birth certificate is filed by the parent or someone else aware of the facts of birth. Formal testing of completeness of birth registration has not been done since 1950 when birth registration completeness for births occurring in hospitals was 99.6 percent. Since that time, additional checks have been added to ensure that all births are filed. Also, since the legal requirements for certified copies of births have increased, nearly 100 percent of all births are filed with CHS.

DEATHS. Mortality data are obtained from death certificates filed with CHS. In Alabama, the funeral director who first takes custody of the body is responsible for obtaining the demographic data from the next of kin and filing the death certificate. The medical certification is completed by the physician in charge of the care of the decedent for the illness or condition that resulted in death or by the county medical examiner or coroner. Registration of deaths is thought to be nearly 100 percent complete since the death certificate is needed by the next of kin for legal purposes. In addition, listings of deaths, which are independently prepared by funeral directors, coroners, hospitals, nursing homes and other institutions where deaths occur, are compared to certificates received to ensure that all deaths are filed.

MARRIAGES. The judge of probate in each county in Alabama issues a marriage license containing information obtained from the parties who intend to be married. After the marriage ceremony has taken place, the person who performs the marriage certifies the fact of marriage and returns the record to the judge of probate who forwards it to the CHS. Marriage data are believed to be nearly 100 percent complete since a license is needed prior to the ceremony being performed.

DIVORCES. Divorce certificates are prepared by the petitioner or his or her legal representative and presented to the clerk of a court where divorces are granted. The clerk of the court completes the information certifying the divorce and forwards the certificate to the CHS. While the law does require the divorce certificate to be filed before a divorce is granted, the filing of these records may not be as complete as other vital records since court procedures vary.

FETAL DEATHS. Reports of fetal death are required to be sent to the CHS if the fetus has advanced to or beyond the twentieth week of uterogestation. If the fetal death occurs in an institution, the person in charge of the institution or his or her representative is responsible for filing the report. If the fetal death occurs outside of an institution, the physician in attendance is responsible for filing the report. Since not all fetal deaths are medically attended, it is likely that there is some under reporting of these events. Evidence indicates that reporting may be better in metropolitan counties.

INDUCED TERMINATIONS OF PREGNANCY. Since 1993, reports of induced termination of pregnancy have been required for all events occurring in Alabama. If the induced termination of pregnancy occurs in an institution, the person in charge of the institution is required to file the report. If the induced termination of pregnancy occurs outside of an institution, the physician in attendance is required to file the report. From September 1987 to December 1992, the only reporting requirement for induced terminations of pregnancy was for events to women under 18 years of age as part of the Parental Consent Act. The degree of completeness for these reports is not known. However, if the CHS learns of institutions that are not aware of the reporting requirements, they are contacted and reporting is immediately initiated.

OUT OF STATE EVENTS. To have complete data for state residents, offices of vital statistics in all states have entered into an agreement to share data for statistical purposes. When a report or certificate is filed for a vital event that occurred in Alabama to a resident of another state or Canada, Alabama notifies that government. Likewise, Alabama receives information and reports about events happening to Alabama residents in other states or in Canada. Data from these out of state events are included in the tabulations of resident data presented in this publication.

Most states send reports of out of state events to CHS on an ongoing basis, and these reports are believed to be quite complete since laws and procedures in other states are quite similar to Alabama's. The exception is reports of induced termination of pregnancy which have different reporting requirements in other states. Florida, a neighboring state, does not have a procedure for reporting Alabama resident induced terminations of pregnancy to CHS. Since it is unknown how many Alabama residents might have these events in neighboring states, the number of reported induced terminations of pregnancy for Alabama residents might be somewhat low. For 2005-2008, Georgia did not send some of the records of events which occurred there for Alabama residents. In addition many of the records received were missing information on a number of characteristics of the events, thus, the large number of unknowns in the tables for 2009. In addition, since unknown race is coded to white, the number of black and other races was understated and the number of whites was overstated. This was especially noticeable in Russell County and other counties of eastern Alabama where a large number of births occurred in Georgia. Information will also be missing for some items from states using the 2003 revision of the birth certificate. This can affect trends from year to year during this period.

Quality of Data

After reports and certificates are received at CHS, they are reviewed for all necessary information and signatures. Records that are incomplete or improperly completed are returned to the provider to be redone. If the information is accurate and consistent, the record is accepted into the official vital record files for Alabama.

Data for 99 percent of the births are keyed at the hospital into the Electronic Birth Registration system that contains edits and consistency checks, and the information is electronically transmitted to CHS over the internet. Data for deaths, induced terminations of pregnancy, marriages and divorces are coded and keyed into a computer database by CHS staff. Now approximately half of the divorces filed are submitted electronically using the Administrative Office of Courts E-File System. Numerous edits and consistency checks are performed on all computer files to insure that the data are as accurate as possible. If data are inconsistent or missing, the provider is queried to try to verify information provided or to obtain the correct data. Additional procedures cross-check that all births and deaths are accounted for, particularly for infant deaths.

Residence Data

Unless specifically noted otherwise, data from vital events in this publication are reported according to the county or place of residence where the person, patient or decedent actually lived. Birth, fetal death, and induced termination of pregnancy statistics are reported according to the mother's residence. Deaths are reported by the residence of the decedent. The exceptions are marriage and divorce data that are reported according to the county where the marriage certificate was issued or the divorce was finalized.

Vital events occurring in other states and Canada to Alabama residents are also included in the residence data in this publication. See discussion under SOURCES AND COMPLETENESS OF DATA -- OUT OF STATE EVENTS.

Population Denominators

Different population denominators have been used in this publication depending on the year. For 1990, 2000 and 2010, actual Census counts were used for the denominators for the rates. For the years 1991 through 1999, the Population figures used were prepared by the Alabama State Data Center, Center for Business and Economic Research, University of Alabama (CBER) projecting forward from the 1990 Census. Caution should be used in comparing rates over time, since the further away from the Census, the less accurate the populations and associated rates become. Based on 2000 Census data, the CBER population projections for the late 1990's appear to be too low, and thus the rates for those years may be too high.

Population figures used to calculate rates for 2001 and 2002 were again from projections provided by CBER. These population figures were based on 2000 US Census counts and projected forward. Beginning in 2003, US Census estimates (rather than CBER projections) were used for population denominators in CHS publications.

The rates in this publication may not be the same as those given in other publications if population data are from a different source. For the years between decennial national censuses, the National Center for Health Statistics (NCHS) calculates crude rates using population estimates provided by the US Census Bureau. These figures are calculated in retrospect based on various housing, labor and vital statistics.

Race

Birth, fetal death, and induced termination of pregnancy statistics are reported according to the race of the mother since many of the health conditions related to these events are directly associated with the mother. Deaths are reported by the race of the decedent. Infant deaths are tabulated by the race of the infant (the decedent) while births, the denominator used for calculating infant mortality rates, are based on the race of the mother. Data for marriages and divorces are shown for both parties to the event.

For processing purposes, ten racial groupings are used: White, Black, American Indian, Chinese, Japanese, Hawaiian, Filipino, other Asian or Pacific Islander, other entries and unknown race. However, for tables shown in this publication, these groups are consolidated into White and Black and Other. White encompasses Mexican, Puerto Rican, Cajun, Creole, and Other Caucasian. The Black and Other group includes Black, American Indian, Chinese, Japanese, Hawaiian, Filipino, and Other Asian or Pacific Islander. Events of unknown race are included in the White category.

Population figures from the 2010 Census show the population for Alabama as 68.5 percent White, 26.2 percent Black and 5.3 percent Other races. One percent of the population reported two or more races and were included in the Black and Other population for tables shown in this publication.

Cause of Death

Alabama law requires the physician in charge of the care of the patient for the illness or condition that resulted in death to complete the medical certification section on the death certificate. The physician is requested to state the diseases or conditions that caused the death and other significant conditions contributing to death. If a death occurs with no physician in charge of the care, the county coroner or in a few counties, the medical examiner, is responsible for determining the cause of death.

CLASSIFICATION. For tabulation purposes, causes of death are coded according to the *International Classification of Diseases*¹ (ICD) which provides the essential ground rules for the coding and classification of cause-of-death data. The ICD was developed collaboratively between the World Health Organization (WHO) and ten international centers, one of which is housed at NCHS. The purpose of the ICD is to promote international comparability in the collection, classification, processing and presentation of health statistics. The United States is required to use the ICD under an agreement with WHO that has the force of an international treaty.

Besides being a classification system for the cause of death, the ICD includes coding rules. These rules identify the single condition on the death certificate considered most informative from a public health point of view, called the *underlying cause of death*. The underlying cause is the disease or injury initiating the sequence of events that leads directly to death or the circumstances of the accident or violence that produced the fatal injury.

Cause of death data in this publication were coded according to procedures established by the National Center for Health Statistics². Starting with death records for 1999, cause of death data were processed through computer software programs from NCHS which allow CHS staff to enter the literal information provided by the physician or coroner in the medical certification section of the death certificate. The software programs are written to apply WHO rules to select the underlying cause of death from all the conditions given on the death certificate. Tables in this publication contain the underlying cause of death as determined through these procedures.

TABULATION LISTS AND CAUSE OF DEATH RANKINGS. For dissemination and presentation of data, NCHS developed several tabulation lists which group causes of death codes into categories that are of public health interest and medical importance. The lists have increasing levels of detail or are for specific categories of death and are published in Part 9 of the NCHS Instruction Manual Series.³ Certain groups of causes on these lists are used for ranking causes of death to determine the leading causes of death. Starting with 1999 data, the list most widely used to identify and rank the leading causes of death in the United States is the *ICD-10 List of 113 Selected Causes of Death*. This list replaces the *ICD-9 List of 72 Selected Causes of Death* used from 1979 through 1998. For areas smaller than a state or nation, a *condensed list of selected causes* was developed to present cause of death data in Alabama.

¹World Health Organization. "International Statistical Classification of Diseases and Related Health Problems, Tenth Revision." Geneva: World Health Organization, 1992.

²National Center for Health Statistics. "NCHS Instruction Manual, Part 2a, Vital Statistics, Instructions for Classifying the Underlying Cause of Death." Hyattsville, Maryland: Public Health Service, published annually.

³National Center for Health Statistics, Centers for Disease Control and Prevention. "Instruction Manual Part 9, ICD-10 Cause-of-Death Lists for Tabulation Mortality Statistics, Effective 1999." Hyattsville, Maryland: October, 1997.

CHANGE IN ICD CODES. The ICD codes have been revised every 10 to 20 years to stay abreast with advances in medical science and to ensure the international comparability of health statistics. The tenth and most recent revision, known as the ICD-10, was first used to classify deaths that occurred on January 1, 1999 and after. The previous version, the ICD-9, was used from 1979 through 1998.

The ICD-10 is much more detailed with about 8,000 possible categories for cause of death compared with 4,000 categories in the previous version. For the first time, the ICD-10 uses alphanumeric codes. In the tenth revision of the ICD, cause of death titles have been changed and conditions have been regrouped. Some coding rules have also been changed. In addition, ICD-10 tabulation lists used in publications have also changed, so mortality data prepared under different revisions of the ICD may not be comparable.

COMPARISON OF CAUSE OF DEATH DATA. Changes in moving to a new revision of the ICD can cause major discontinuities in trend data for certain causes of death. To understand the changes in mortality rates that are simply due to the new ICD revision, NCHS double codes a large sample of deaths under each revision to develop *comparability ratios*. This is simply the ratio of deaths coded under the new revision (ICD-10) divided by the number under the old revision (ICD-9) for a particular cause of death. These ratios are given in Robert Anderson, *et. al.*, *Comparability of Cause of Death between ICD-9 and ICD-10: Preliminary Estimates*, Hyattsville, MD, National Vital Statistics Reports, Volume 49, Number 2, May 18, 2001. Comparability ratios can be applied to specific cause of death groups that were coded under ICD-9 to see how many deaths in that specific group would result if those same deaths had been coded under the new ICD-10. Application of the comparability ratios is crucial in time trend analyses. For additional information on comparability ratios, see the NCHS web site at www.cdc.gov/nchs.

Handling of Unknowns

Items with a missing value or a response of "unknown" are shown as Not Stated in tables of frequency distributions and are included in totals and subtotals. However, for calculation of rates and ratios, "unknowns" are subtracted from denominators before calculations are made.

The only exceptions to this rule are for race and sex. Events with race "unknown" are included with "white" for tabulation purposes. If sex cannot be determined, sex is considered male if the day of the event is odd and female if the day is even.

Data Techniques

Data in this publication are generally presented as frequencies, rates, ratios and percentages. Frequency distributions tell how many times an event occurred for a particular population. For purposes of comparison rates, ratios and percentages are provided to standardize the figures. A ratio is a comparison of two quantities and is generally expressed as a fraction. A rate is the number of items having a certain characteristic divided by the total number of items. Rates are generally expressed to a standard base of 100, 1,000 or 100,000. Percentages are rates standardized to a base of 100. Rounding errors may exist because of the estimation techniques.

Demographic rates make all populations equal in size. Demographic rates such as the death rate and birth rate are calculated by dividing the number of events in a given period by the population at risk during that period. Thus, rates give the number of events per person, or the average. By standardizing all populations to the same size, we eliminate one factor that makes comparisons among areas difficult.

The base of a demographic rate may be the total population or a sub population. Rates based on the total population are called crude rates. Others are called specific rates, such as age-specific rates used for children or teenaged populations or the sex-specific rate for prostate cancer. For information on specific calculations, see the section on FORMULAS.

Small Number Limitations

When using vital events data for studying small geographic areas or for examining specific medical or social factors, the number of events reported in a given year may be very small. Understanding the statistical limitations of small numbers is important in conducting analyses. Any time something is measured, error is almost inevitable. Error can be based on the accuracy of the reports, or alternately, on the number of the events or the size of the population. Some error is random, and when the numbers are very large, random error does not affect the usefulness of the data. However, when the number of vital events is very small or the population of the area is very low, random errors in data collection, or even randomly occurring events, can cause drastic fluctuations in rates.

One way to counteract random error is to increase the number of years or enlarge the area being studied. Otherwise calculations may be correct, but of very limited practical value. In this publication, rates are given regardless of their stability; however, for rates based on very small numbers, warnings are issued in the footnotes.

DEFINITIONS

Some definitions used in this publication may vary in meaning among states or nations. In addition, some definitions change over time. Center for Health Statistics definitions are consistent for all publications within a given year and are generally the same definitions used by the National Center for Health Statistics. However, a data-user should always compare definitions across geographical areas and times.

ABORTION - See INDUCED TERMINATION OF PREGNANCY. In this publication, the terms abortion and induced termination of pregnancy are used synonymously.

AGE SPECIFIC BIRTH RATE - The number of births to women in a specific age group, divided by the estimated number of women in that age group multiplied by 1,000.

ANNULMENT - "To nullify, to abolish, to make void by competent authority. An annulment differs from a divorce in that a divorce terminates a legal status, whereas an annulment establishes that a marital status never existed" from Black's Law Dictionary, Sixth Edition. In this publication, annulments are included with divorces for rate calculation purposes and are available only by place of occurrence.

BIRTH - See LIVE BIRTH. In this publication, the terms live birth and birth are used synonymously.

CAUSE OF DEATH - The cause of death presented in this publication is the "underlying cause" which is defined as the cause deemed responsible for the sequence of morbid events leading directly to death or the circumstances of the accident or violence that produced the fatal injury. Deaths, by cause, are classified according to the International Classification of Diseases (ICD), Tenth Revision, following instructions established by the National Center for Health Statistics. See Appendix C in the Alabama Vital Statistics Publication for the compilation lists and ICD 10 codes used for the leading cause of death.

DEATH - Death is defined in Black's Law Dictionary, Sixth Edition as "The cessation of life; permanent cessations of all vital functions and signs." For definitions of the determination of death under other than general circumstances, the Code of Alabama should be consulted.

DIVORCE - A court decree dissolving a marital relationship. A divorce from bed and board is a separation from cohabitation which does not otherwise affect the marriage and is not included in this publication. See Code of Alabama for additional information. For rate calculation purposes in this publication, divorces include annulments and are reported by the county where the divorce occurred.

ESTIMATED PREGNANCIES - The sum of births, induced terminations of pregnancy, and estimated total fetal losses. Rounding errors may exist because of the estimation techniques.

ESTIMATED TOTAL FETAL LOSSES - This term, which is a component used in determining the number of estimated pregnancies, is an estimate of the total number of fetal losses regardless of the gestational age of the fetus. Estimated total fetal losses is equal to the sum of 20 percent of births and 10 percent of induced terminations of pregnancy. This formula was developed by The Alan Guttmacher Institute and is widely accepted and used. Estimated total fetal losses should be distinguished from the term fetal deaths as used in this publication. While Alabama law defines fetal death to include all gestations (see definition of FETAL DEATH), only fetal deaths of at least 20 weeks in gestation are required to be reported by Alabama law and are the only ones counted as fetal deaths in this publication. Rounding errors may exist because of the estimation techniques.

FETAL DEATH - "Death prior to the complete expulsion or extraction from the mother of a product of human conception, irrespective of the duration of pregnancy and which is not an induced termination of pregnancy. The death is indicated by the fact that after the expulsion or extraction the fetus does not breathe or show any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles. Heartbeats are to be distinguished from transient cardiac contractions; respirations are to be distinguished from fleeting respiratory efforts or gasps." Code of Alabama, 1975, Section 22-9A-1. While the definition of fetal death includes all gestations, only fetal deaths that have advanced to or are beyond the twentieth week of uterogestation are required to be reported under Alabama law and they are the only ones counted as fetal deaths in this publication. (Also see ESTIMATED TOTAL FETAL LOSSES.)

INDUCED TERMINATION OF PREGNANCY - "The purposeful interruption of an intrauterine pregnancy with the intention other than to produce a liveborn infant and which does not result in a live birth. This definition excludes management of prolonged retention of products of conception following fetal death." Code of Alabama, 1975, Section 22-9A-1. In these publications, the terms induced termination of pregnancy and abortion are used synonymously.

INFANT DEATH - Death of a liveborn infant under one year of age. The term excludes fetal death.

INTERNATIONAL CLASSIFICATION OF DISEASES (ICD) - A publication of the World Health Organization (WHO) that provides the essential ground rules for the coding and classification of cause-of-death data. The purpose of the ICD and of WHO sponsorship is to promote international comparability in the collection, classification, processing and presentation of health statistics. In addition to being a classification system, the rules provide for identification of a single condition on the death certificate that is considered most informative from a public health point of view, called the underlying cause of death.

LIFE EXPECTANCY AT BIRTH – Average years of life a newborn infant would be expected to live if health and living conditions at the time of its birth remained the same throughout its life.

LIVE BIRTH - "The complete expulsion or extraction from the mother of a product of human conception, irrespective of the duration of the pregnancy, which, after such

expulsion or extraction, breathes or shows any other evidence of life such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached. Heartbeats are to be distinguished from transient cardiac contractions; respirations are to be distinguished from fleeting respiratory efforts or gasps." Code of Alabama, 1975, Section 22-9A-1. In these publications, the terms live birth and birth are used synonymously.

LOW BIRTH WEIGHT - A weight at birth of under 2,500 grams or under 5 pounds and 8 ounces.

MARRIAGE - The legal union of a man and a woman that establishes their relationship as husband and wife. See Code of Alabama for additional information. Marriage data are reported by the county where the marriage occurred.

MEDIAN AGE- The median age is the age that divides the age distribution of a given population into two equal groups, one that is younger than the median and one that is older than the median age.

NEONATAL DEATH - Death of a liveborn infant occurring within the first 27 days of life.

OCCURRENCE DATA - Data compiled as to the geographical place where the event occurred.

POSTNEONATAL DEATH - Death of a liveborn infant after the first 27 days of age, but before one year of age.

STILLBIRTH - See Fetal Death.

RESIDENT DATA - Data compiled as to the place of residence without regard to the geographical place where the event occurred. For births and fetal deaths, place of residence of mother is used.

TEENAGE - In this publication, persons aged 10 years through 19 years.

TOTAL FERTILITY RATE - An estimate of the average number of children that 1,000 women would bear if the current age-specific birth rates remained constant.

FORMULAS

Birth (crude) rate	=		$\frac{\text{(number of births)}}{\text{(estimated midyear population)}}$	X	1,000
Age-specific birth rate	=		$\frac{\text{(number of live births to females in a specific age group)}}{\text{(estimated female population in that age group)}}$	X	1,000
Teen-age birth rate	=		$\frac{\text{(number of births to females aged 10-19)}}{\text{(estimated female population aged 10-19)}}$	X	1,000
Abortion rate	=		$\frac{\text{(number of abortions)}}{\text{(estimated female population aged 15-44)}}$	X	1,000
Teenage abortion rate	=		$\frac{\text{(number of abortions to females aged 10-19)}}{\text{(estimated female population aged 10-19)}}$	X	1,000
Estimated total fetal losses	=		20 percent of births + 10 percent of abortions		
Estimated pregnancies	=		number of births + number of abortions + estimated total fetal losses		
Pregnancy rate	=		$\frac{\text{(number of births + number of abortions + estimated total fetal losses)}}{\text{(estimated female population 15-44 years of age)}}$	X	1,000
Teenage pregnancy rate	=		$\frac{\text{(number of births to females aged 10-19 + number of abortions to females aged 10-19 + estimated total fetal losses to females aged 10-19)}}{\text{(estimated female population 10-19 years of age)}}$	X	1,000
Total fertility rate	=	\sum	(five-year age-specific birth rates for females aged 10 to 49)	X	5

Percent low weight births	=	$\frac{\text{(number of births with a birth weight less than 2500 grams)}}{\text{(number of births)}}$	X	100
Infant mortality rate	=	$\frac{\text{(number of deaths to live born infants under one year of age)}}{\text{(number of live births)}}$	X	1,000
Neonatal mortality rate	=	$\frac{\text{(number of deaths to live born infants occurring within the first 27 days of life)}}{\text{(number of births)}}$	X	1,000
Post-neonatal mortality rate	=	$\frac{\text{(number of deaths to live born infants occurring after the first 27 days of life but before one year of age)}}{\text{(number of births)}}$	X	1,000
Death (crude) rate	=	$\frac{\text{(number of deaths)}}{\text{(estimated midyear population)}}$	X	1,000
Cause-specific death rate	=	$\frac{\text{(number of deaths for a specific cause)}}{\text{(estimated midyear population)}}$	X	100,000
Age-specific death rate	=	$\frac{\text{(number of deaths for a specific age group)}}{\text{(estimated midyear population for that age group)}}$	X	1,000
Marriage rate	=	$\frac{\text{(number of marriages)}}{\text{(estimated mid-year population)}}$	X	1,000
Divorce (dissolution) rate	=	$\frac{\text{(number of divorces and annulments)}}{\text{(estimated mid-year population)}}$	X	1,000

ICD-10 CODES USED IN THE COUNTY HEALTH PROFILES

SELECTED DEATHS

Heart Disease = I00-I09 or I11 or I13 or I20-I51

Cancer = C00-C99

Stroke = I60-I69

Accidents = V01-X59 or Y85-Y86

Chronic Lower Respiratory = J40-J47

Diabetes = E10-E14

Influenza & Pneumonia = J09-J18

Alzheimer's Disease = G30

Suicide = X60-X84 or Y870

Homicide = X85-Y09 or Y871

HIV = B20-B24

ACCIDENTAL DEATHS

All Accidents = V01-X59 or Y85-Y86

Motor Vehicle = V02-V04 or V090 or V092 or V12-V14 or V190-V192 or V194-V196 or

V20-V79 or V803-V805 or V83-V86 or V870-V878 or V880-V888 or

V890 or V892

Suffocation = W75-W84

Poisoning = X40-X49

Smoke, Fire & Flames = X00-X09

Falls = W00-W19

Drowning = W65-W75

Firearms = W32-W34

Other Accidents = All other accident codes not specifically mentioned above.

SELECTED CANCER SITES

All Cancers = C00-C99

Trachea, Bronchus, Lung, Pleura = C33-C34

Colorectal = C18-C21

Breast = C50

Prostate (male) = C61

Pancreas = C25

Leukemias = C91-C95

Non-Hodgkin's Lymphomas = C82-C85

Ovary (female) = C56

Brain and other nervous system = C70-C72

Stomach = C16

Uterus & Cervix (female) = C53-C55

Esophagus = C15

Melanoma of Skin = C43

Other = All other cancer sites not mentioned specifically above
