## **Second rabid raccoon in Butler County prompts heightened rabies warning**

### **FOR IMMEDIATE RELEASE**

#### **CONTACT:**

Jim Wood  
Stacy L. Williamson  
(334) 382-3154

Local public health officials are urging people to take basic, but extremely important, precautions in the Butler County area against rabies. The warning follows the confirmation of a positive raccoon that was found in the Avant community east of Georgiana on April 13. This is the second positive rabid raccoon confirmed in Butler County this year. The main concern is that a rabid animal may come into contact with humans, their pets or livestock.

The following precautions should be taken to avoid possible exposure to rabies:

- Do not allow pets to run loose; confine them within a fenced-in area or with a leash.
- Do not leave uneaten pet food or scraps around your house.
- Do not illegally feed or keep wildlife as pets.
- Do not go near wildlife or domestic animals that are acting in a strange or unusual manner.
- Instruct children not to go near any stray or wild animal regardless of its behavior.
- Advise children to tell an adult if they are bitten or scratched by an animal. Butler County has experienced an increase in the number of bites by domestic animals in the past few months.

A person who is bitten or scratched by an animal should wash wounds immediately with mild soap and water, apply first aid, and seek medical attention or contact the county health department immediately. Rabies is preventable in humans following exposure if treatment is provided in a timely manner.

Alabama state law requires that all dogs, cats and ferrets 12 weeks of age and older be kept current with rabies vaccination. Rabies vaccines are also available for horses and other livestock if recommended by a veterinarian. Vaccinating animals reduces the risk of rabies infection should an exposure occur, thus vaccination helps protect the animals, as well as their owners and caretakers.
